

# Face masks, eyewear and N95 respirators

Every protection level and preference

# Choose the right mask for every procedure

Different procedures require different levels of protection, and ASTM standards make it easy for your staff to get the ideal face mask for any procedure-and for every preference.

## Measuring fluid resistance, filtration and breathability, ASTM categorizes masks into three levels

### ASTM Level 1

For procedures producing low amounts of fluid, spray and/or aerosols.

### ASTM Level 2

For procedures producing light to moderate amounts of fluid, spray and/or aerosols.

### ASTM Level 3

For procedures producing moderate to heavy amounts of fluid, spray and/or aerosols.

To meet ASTM F2100-19 standards, our masks undergo a series of tests for particle filtration (PFE), bacterial filtration (BFE), differential pressure or breathability ( $\Delta P$ ) and fluid resistance.

	Level 1 Low fluids	Level 2 Light to moderate fluids	Level 3 Moderate to high fluids
PFE at 0.1 micron ASTM F2299	 $\geq 95\%$	 $\geq 98\%$	 $\geq 98\%$
BFE at 3.0 micron ASTM F2101	 $\geq 95\%$	 $\geq 98\%$	 $\geq 98\%$
Delta P ( $\Delta P$ ) mm H <sub>2</sub> O/cm <sup>2</sup> MIL-M-36954C	 <5	 <6	 <6
Fluid resistance (mmHg)	 $\geq 80 \text{ mm Hg}$	 $\geq 120 \text{ mm Hg}$	 $\geq 160 \text{ mm Hg}$
Flammability	 Class 1	 Class 1	 Class 1

#### Fluid resistance

Tests penetration resistance to synthetic blood at three protection levels—80 mm Hg, 120 mm Hg and 160 mm Hg.

#### Particle filtration efficiency (PFE)

Assesses filtration ability when tested against sub-micron particulate matter 0.1 microns in size—which is representative of some viruses.

#### Bacterial filtration efficiency (BFE)

Tests filtration ability against an aerosol containing bacteria 3.0 microns in size.

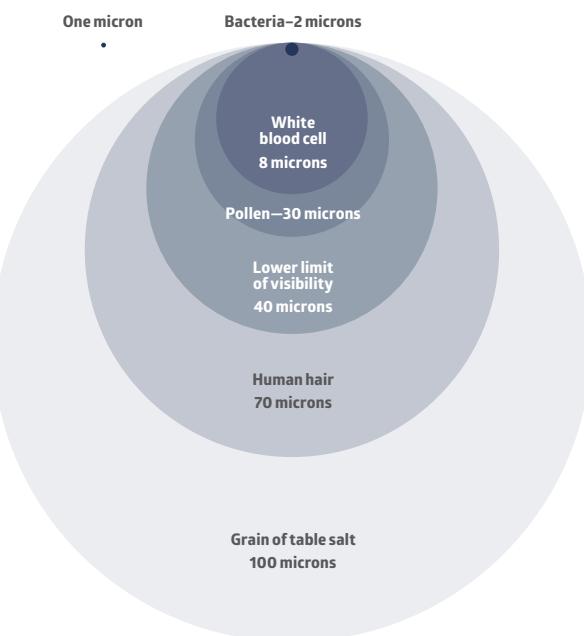

#### Differential Pressure ( $\Delta P$ )

Gauges air flow from one side of a mask to the other, assessing breathability.

#### How small is a micron?

While an actual micron is not visible to the human eye, this magnified diagram demonstrates particulate size by comparing a micron to other common substances.

## Made for comfort and protection

We know how much of your day is spent behind a mask, so we make ours with the most comfortable, effective materials possible.

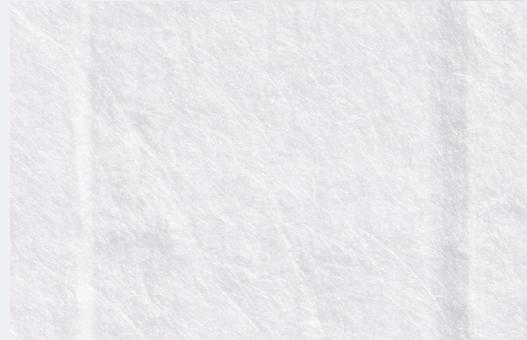

**Smooth cellulose**—used for inner and outer facings

**Soft spunbond polypropylene**—used for inner and outer facings and for an extra layer of protection

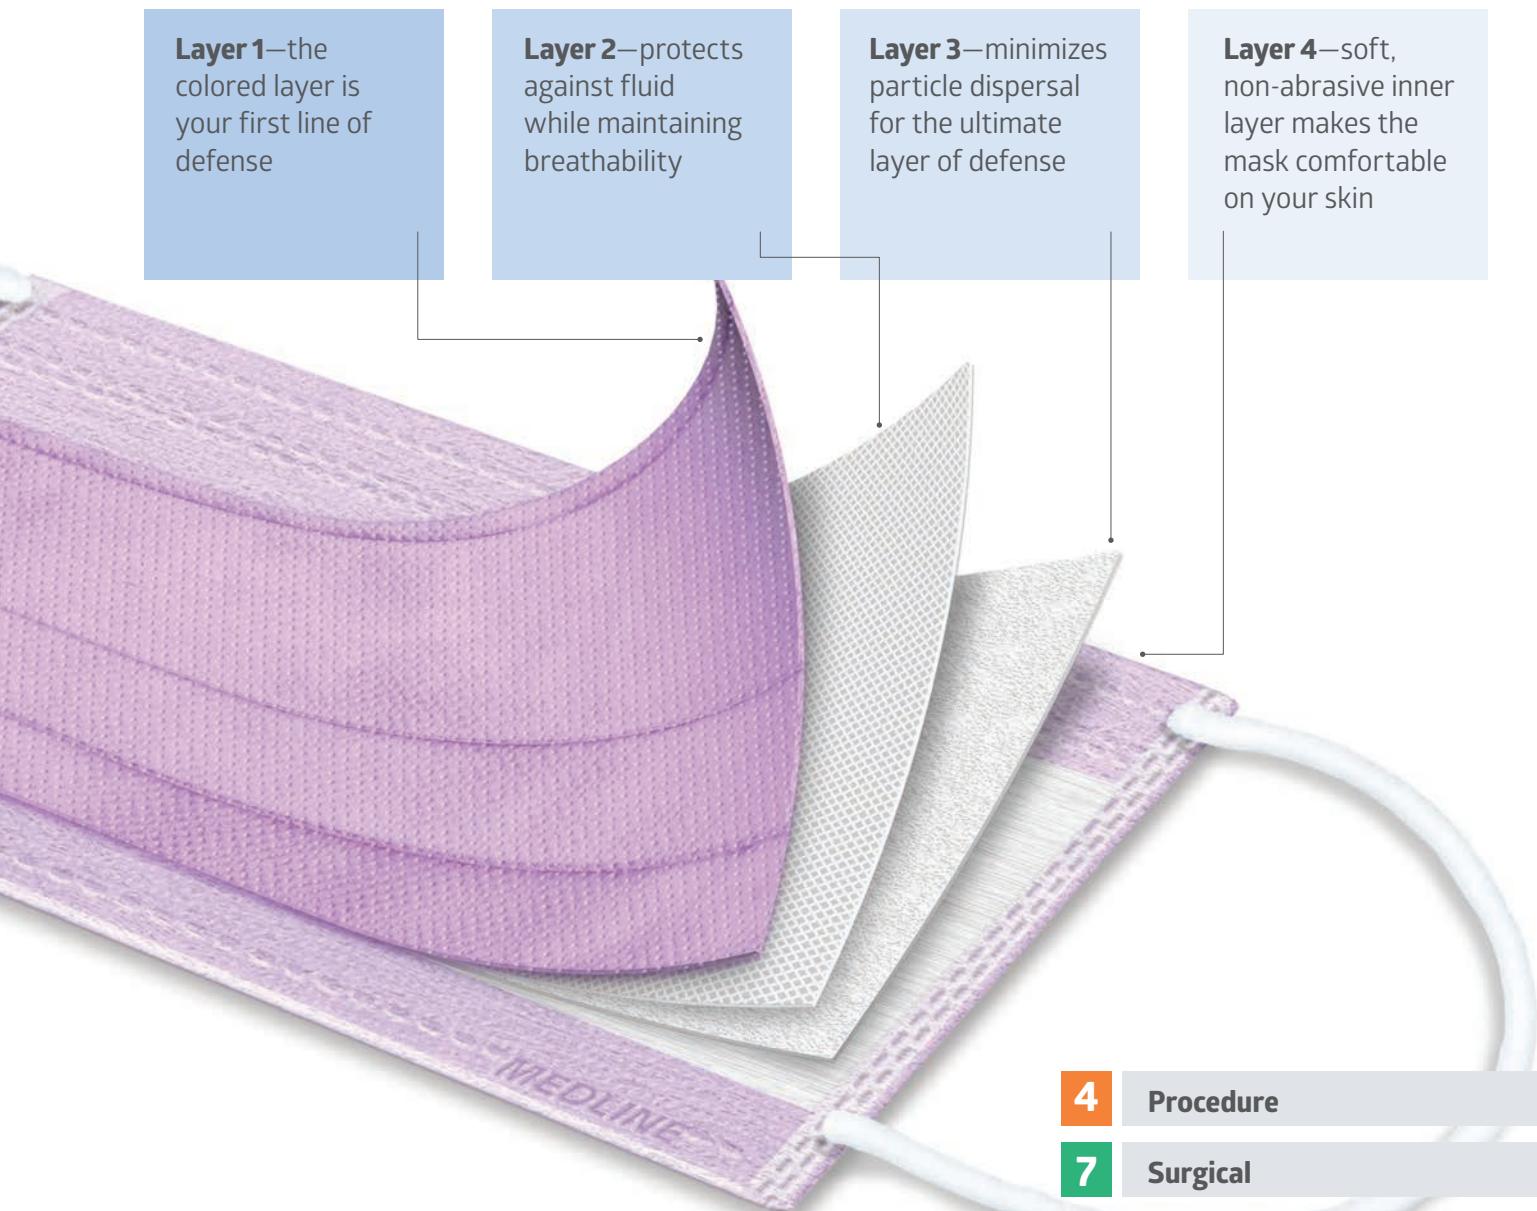

**Meltblown middle layer**—acts as the primary filtration system for the mask

**Silky thermalbond polypropylene**—used for inner facings

Our ASTM level 3 face masks are constructed of four layers for protection, comfort and breathability.

# N95 Respirators

## Fit instructions for N-95 particulate respirators

- 1 Place the respirator under your chin with the nosepiece pointing up.

- 2 Hold the respirator under your chin with the nosepiece up. Stretch the top strap over your head right above your ears. Stretch the bottom strap and position below your ears.

- 3 Conform the nosepiece to the shape of your nose, and adjust the headbands for comfortable fit.

- 4 Cup both hands over the mask, checking for tightness, and inhale sharply. Negative pressure should be felt in the mask.
